

SWAP method for spin lattice models

Greivin Alfaro
Leticia Cugliandolo
Marco Tarzia

Problem: Slow relaxational dynamics

Edwards-Anderson model (2d)

$$\mathcal{H} = - \sum_{\langle ij \rangle} J_{ij} \sigma_i \sigma_j, \quad \sigma_i = \pm 1, \quad i = 1, \dots, N$$

4-Point Correlation Function

$$C_4(r, t) = \frac{1}{N} \sum_{i, j=1}^N \left[\langle \sigma_j^{(1)}(t) \sigma_i^{(1)}(t) \sigma_j^{(2)}(t) \sigma_i^{(2)}(t) \rangle \right] \Big|_{|\vec{r}_i - \vec{r}_j| = r}$$

Growing length

$$R(t) = 2 \int_0^\infty dr C_4(r, t)$$

Solution for structural glasses

Efficient swap algorithms for molecular dynamics simulations of equilibrium supercooled liquids

Mapping to spin lattices

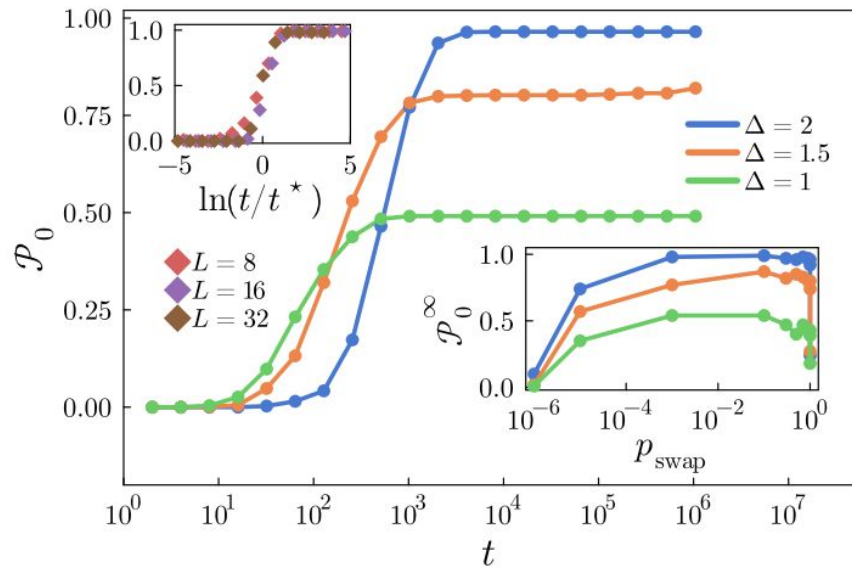

$$\mathcal{H} = - \sum_{\langle ij \rangle} J_{ij} s_i s_j, \quad s_i = \sigma_i \tau_i \quad \text{with} \quad \tau_i \in [1 - \Delta/2, 1 + \Delta/2]$$

and $0 \leq \Delta \leq 2$

$$\mathcal{H} = - \sum_{\langle ij \rangle} \mathcal{J}_{ij} \sigma_i \sigma_j, \quad \mathcal{J}_{ij} = J_{ij} \tau_i \tau_j$$

We are able to find the ground states!

hskTan!

hskTan!

A diagram illustrating a swap operation on the string "hskTan!". The characters 'h' and 'T' are highlighted with green rectangular boxes. A green curved arrow points from the 'h' box to the 'T' box, and another green curved arrow points from the 'T' box back to the 'h' box, indicating the exchange of their positions.
